Teaching to the Whole Brain: Which Side is Paying Attention?

Recognizing differences in how the brain learns can make us more effective educators. Recent brain health breakthroughs and current studies have provided insight on the most effective ways to build knowledge. By understanding brain function, we can more accurately pinpoint how to attend to students' learning preferences, and develop techniques that address their needs. Activities & assessment that incorporates the whole brain will be explored.

Topics Include:

- ▶ **Implications of recent brain research on education**
- ▶ **Common myths of the human brain**
- ▶ **Most effective methods of creating positive learning moments**
- ▶ **Top 10 things teachers can do to improve learning**

Campus Information

Presenters Include:

Sandra Bond Chapman, Ph.D.
